I am writing to you with extreme concern after discovering that Glyphosate is being found in children's vaccinations. I am not only a mother to a young child, who has received all of the vaccinations that have been found to contain Glyphosate, but I am also a registered nurse. I am currently administering these vaccinations to infants! How can I tell parents that we, their child's healthcare providers, recommend these vaccinations when I have learned this shocking news about them? I believe that as parents become more aware of the potential dangers of vaccinating, they may opt to just not vaccinate at all, which has dangers as well. Please put a stop to this! These are our babies and children at stake here!
